

Astronomy & Astrophysics- Part II

Shobhit Mahajan

shobhit.mahajan@gmail.com

Version 1.0

Last modified on April 23, 2023

Contents

1	Introduction & Some Preliminaries	9
1.1	Quantities of Interest	10
1.1.1	Position	11
1.1.2	The Magnitude Scale & Luminosity	17
1.1.3	Color Index	21
1.1.4	Effective Temperature	28
1.1.5	Mass	39
1.1.6	Distance	45
1.2	Composition	60
1.2.1	Boltzmann equation	62
1.2.2	Saha Equation	67
1.3	Hertzsprung-Russell Diagram	85
2	Thermodynamic Preliminaries	90
2.1	Ideal Gas	90
2.2	Mean Molecular Weight	93
2.3	Adiabatic Changes	102
2.3.1	Ideal Gas	103
2.3.2	Radiation	107
2.4	Polytropic Changes	113
2.5	Mixture of Gas & Radiation	116
2.5.1	Adiabatic Changes	118
2.5.2	Specific Heats	128
3	Virial Theorem	135
3.1	Virial Theorem	135
3.2	Total Net Energy	145
3.3	Stellar Time Scales	156
3.3.1	Dynamical or Free Fall Time Scale	156
3.3.2	Sound Crossing time	157

3.3.3	Kelvin-Helmholtz time scale	161
3.3.4	Nuclear Time Scale	162
4	Hydrostatic Equilibrium	164
4.1	Equation of Hydrostatic Equilibrium	164
4.1.1	Equation of Motion	164
4.1.2	Hydrostatic Equilibrium	167
4.1.3	Euler vs Lagrangian Coordinates	169
4.2	Some Applications of Equation of Hydrostatic Equilibrium	170
4.2.1	Another Derivation of the Virial Theorem	170
4.2.2	Potential Energy	172
4.2.3	Estimate of Pressure at the center of a star	183
5	Some Theorems about Gaseous Configurations	187
5.1	Total Energy	187
5.2	Eddington-Chandrasekhar result for Central Pressure	190
5.2.1	Effect of Radiation Pressure	192
5.3	Mean Temperature & Pressure inside the Star	197
5.4	Homologous Transformations of Gaseous Spheres	200
6	Stellar Structure: Preliminaries	203
6.1	Equation of Energy Transport	203
6.2	Equations of Stellar Structure	209
6.2.1	Simplifying Assumptions	214
7	Stellar Structure: Details	222
7.1	Polytropes	222
7.2	Lane-Emden Equation	225
7.3	Solutions of the Lane-Emden Equation	229
7.3.1	Solution for $n=0$	230
7.3.2	Solution for $n=1$	231
7.3.3	Solution for $n=5$	233
7.3.4	Numerical Solutions for other values of n	235
7.4	Some Important Results for Polytropes	240
7.4.1	Radius of a Star	240
7.4.2	Mass	241
7.4.3	Mass-Radius Relationship	242
7.4.4	Central Density & Average Density	243
7.4.5	Central Pressure	244

7.4.6	Central Temperature	246
7.4.7	Gravitational Binding Energy	248
7.5	Simplified Eddington Model	251
7.6	Comparison of Eddington Model with Standard Solar Model	256
7.7	Homologous Transformations	265
7.7.1	Mass-Luminosity Relation	269
7.7.2	Mass-Radius Relation	270
7.7.3	Homologous Transformation- Lane-Emden Equation	272
8	Energy Transport in Stars	275
8.1	Some General Considerations	275
8.2	Opacity	278
8.3	Emission	283
8.4	Diffusion Approximation	286
8.4.1	Eddington Luminosity	291
8.5	Sources of Opacity	297
8.5.1	Electron Scattering	298
8.5.2	Free-Free Absorption	304
8.5.3	Bound-Free Absorption	307
8.5.4	Bound-Bound absorption	309
8.5.5	Negative H ion	310
8.5.6	Molecular Opacity	311
8.6	Convection	314
8.6.1	Pressure scale height	315
8.6.2	Adiabatic Temperature Gradient	317
8.6.3	Brunt-Vaisala Frequency	323
8.6.4	Stability against convection in terms of energy production rate	327
8.6.5	Mixing-Length Model	331
8.7	The Standard Model	343
8.7.1	Mass	344
8.7.2	Central Density	345
8.7.3	Central Pressure	345
8.8	Central Temperature	346
8.8.1	Mass-Luminosity-Radius Relation	349
9	Energy Generation in Stars: Reaction Rates	352
9.1	Kelvin-Helmholtz Hypothesis	352
9.2	Nuclear Reactions: Some Preliminaries	354
9.2.1	Kinematics	354

9.2.2	Binding energy of the Nucleus	358
9.3	Cross Section	361
9.4	Digression: Is Fusion possible classically?	365
9.5	Reaction Rate	371
9.6	Corrections to the Reaction Rates & Cross Section	390
10	Nuclear Burning & Stellar Evolution	392
10.1	Introduction	392
10.2	Life Before the Main Sequence	393
10.2.1	Interstellar Medium	393
10.2.2	21 cm line	394
10.2.3	Giant Molecular Clouds	395
10.2.4	Stages of Star formation	396
10.3	Nuclear Burning: General Comments	412
10.3.1	Deuterium Formation	413
10.4	PPI chain	415
10.4.1	Deuterium Burning	417
10.4.2	Helium-3 Abundance	422
10.4.3	Energy Generation	434
10.5	PPII & PPIII Chains	435
10.6	Energy Generation	447
10.7	CNO Bi-Cycle	454
10.8	Solar Neutrino Problem	459
10.9	Nuclear Burning Beyond the Main Sequence	464
10.9.1	Triple- α Reaction	464
10.9.2	Carbon & Oxygen Burning	466
10.9.3	r & s processes	467
11	Post Main Sequence	
	Part I: White Dwarfs	471
11.1	Introduction	471
11.2	Red Giant Phase	473
11.2.1	Schönberg- Chandrasekhar Limit	473
11.2.2	Sub-Giant (SGB) & Red Giant Branches	478
11.3	Helium Burning Phase	480
11.4	Asymptotic Giant Branch & Planetary Nebulae	481
11.5	White Dwarfs	483
11.5.1	Non-Relativistic Complete Degeneracy	484
11.5.2	Relativistic Complete Degeneracy	488

11.5.3	Partial Degeneracy	499
11.6	Equation of State of a completely degenerate star	516
11.6.1	Radius of the Star	522
11.6.2	Gravitational Potential	523
11.6.3	Mass	525
11.6.4	Mass-Radius Relation	532
11.6.5	Mean Density	533
11.6.6	Mass of a Non-relativistic Degenerate Star	534
11.6.7	Mass of a Ultra Relativistic Degenerate Star	535
11.6.8	Physical Arguments for a Limiting Mass	537
11.6.9	Type Ia Supernovae	539
11.6.10	Internal Energy	540
11.7	Cooling of White Dwarfs	544
11.7.1	Internal Temperature of a White Dwarf Star	546
12	Post Main Sequence	
	Part II: Neutron Stars & Black Holes	550
12.1	Introduction	550
12.2	Core Collapse Supernovae	550
12.3	Neutron Star	556
12.3.1	Structure of a Neutron Star	556
12.3.2	Maximum Mass	558
12.3.3	Relativistic Corrections	559
12.3.4	Numerical Solutions to the TOV equation	568
12.3.5	Rotation & Magnetic Field of Neutron stars	577
12.4	Pulsars	579
12.4.1	Pulsar Properties	581
12.4.2	Oblique Rotator Model	582
12.4.3	Pulsars as probes for interstellar matter- Dispersion Measure	586
12.4.4	Pulsars as probes for interstellar matter- Rotation Measure	589
12.4.5	Pulsar Magnetosphere	594
13	Galaxies	602
13.1	Introduction	602
13.2	Overview & Definitions	602
13.3	The Milky Way	604
13.3.1	Stars in the Milky Way	605
13.3.2	Gas & Dust in the Milky Way	606
13.3.3	Mapping the Milky Way	609

13.3.4	Galactic Rotation	610
13.3.5	Rotation Curve	619
13.4	Galaxy Classification	623
13.4.1	Elliptical Galaxies	623
13.4.2	Spiral Galaxies	624
13.4.3	Irregular Galaxies	624
13.5	Evolution & Formation of Galaxies	625
14	Cosmology Part I: Setting up the Equations	627
14.1	Introduction	627
14.2	Principle of Equivalence	628
14.2.1	Why do we need a theory of Gravity	628
14.2.2	Inertial & Gravitational Mass	629
14.2.3	Gravitational Forces	633
14.2.4	Christoffel Symbols	635
14.3	Principle of General Covariance	637
14.3.1	Tensors & Vectors	638
14.3.2	Covariant Derivative	643
14.4	Riemann Curvature tensor	648
14.4.1	Bianchi Identities	650
14.5	Energy-Momentum Tensor	652
14.5.1	Energy-Momentum Tensor of a Perfect Fluid	656
14.6	Einstein's Equations	658
14.6.1	Schwarzschild Solution	661
15	Cosmology Part II: Observations & Models	666
15.1	Introduction	666
15.2	The Observed Universe	667
15.2.1	Expansion	667
15.2.2	Cosmic Microwave Background Radiation	671
15.2.3	Large Scale Homogeneity & Isotropy	673
15.2.4	Abundances of Light elements	675
15.3	Towards a cosmological model	675
15.3.1	Robertson-Walker Metric	675
15.3.2	Flat Robertson-Walker Metric	676
15.3.3	Spatially Curved Robertson-Walker Metrics- Closed Models	679
15.4	Kinematic Properties of the Robertson-Walker metric	689
15.4.1	Red Shift	689
15.4.2	Distance Measures	701

15.4.3	Redshift-Distance relationship	704
15.4.4	Angular Diameter Distance-Red Shift relation	708
15.4.5	Number Counts	709
15.4.6	Conformal Time	709
15.5	Dynamics of the Robertson-Walker Model	712
15.5.1	Einstein's Equations for Robertson-Walker metric	712
15.5.2	Critical Density and Friedmann equations	730
15.5.3	Cosmological Constant & Friedmann Equations	732
15.6	Expansion Age of the Universe	739
15.6.1	Matter Dominated Era	739
15.6.2	Radiation Dominated Era	748
15.6.3	Age of the Universe & Lookback time	752
15.6.4	Horizons	766
15.7	Benchmark Model of Cosmology	784
15.8	Brief Thermal History of the Universe	803
15.8.1	Thermodynamics in an Expanding Universe	806
15.8.2	Entropy	809
15.8.3	Primordial Nucleosynthesis	825
15.9	Structure in the Universe	829
15.9.1	Jeans' Theory	829
16	Inflation & Very Early Universe	841
16.1	Introduction	841
16.2	Problems with the Hot Big Bang Model	842
16.2.1	Flatness Problem	842
16.2.2	Horizon Problem	844
16.2.3	Monopole Problem	845
16.3	Inflation as a Solution	847
16.3.1	Inflationary Solution to the Flatness Problem	848
16.3.2	Inflationary Solution to the Horizon Problem	850
16.3.3	Inflationary Solution to the Monopole Problem	852
16.4	Mechanics of Inflation	853
A	Classical & Quantum Statistics	859
A.1	Introduction	859
A.2	Maxwell-Boltzmann Statistics	860
A.2.1	Ideal Gas	868
A.3	Fermi-Dirac Statistics	878
A.4	Bose-Einstein Statistics	887

B Newtonian Theory of Small Perturbations	891
B.1 Introduction	891
B.2 Density perturbations in an expanding universe	891
B.3 Growth of Perturbations	898
B.3.1 Matter Perturbations in Matter dominated universe	898
B.3.2 Radiation perturbations in Radiation Dominated Universe	900
B.4 Summary of Jean's Theory in an expanding universe	902
B.5 Transfer Function	907
B.6 Power Spectrum	910
B.7 Adiabatic Gaussian Perturbations	911
B.7.1 Harrison-Zeldovich Spectrum	913
B.8 Power Spectrum Today	914
C Physical Constants & Useful relations	916
D Some Useful Integrals	919
E Spherical Astronomy	930
E.1 Introduction	930
E.2 The Spherical Triangle	931
E.3 Length of an arc of a Small Circle	932
E.4 Cosine Formula	933
E.5 sine formula	936
E.6 Quantities of interest and their definitions	937
E.7 Astronomical Triangle	941
Index	944
