Astronomy & Astrophysics

Version 1.0

Last modified on October 16, 2021

Contents

1	Introduction & Some Preliminaries	9
1.1	Quantities of Interest	10
1.1.1	Position	11
1.1.2	The Magnitude Scale & Luminosity	17
1.1.3	Color Index	21
1.1.4	Effective Temperature	28
1.1.5	Mass	39
1.1.6	Distance	44
1.2	Composition	59
1.2.1	Boltzmann equation	61
1.2.2	Saha Equation	66
1.3	Hertzsprung-Russell Diagram	81
2	Thermodynamic Preliminaries	86
2.1	Ideal Gas	86
2.2	Mean Molecular Weight	89
2.3	Adiabatic Changes	98
2.3.1	Ideal Gas	99
2.3.2	Radiation	103
2.4	Polytropic Changes	109
2.5	Mixture of Gas & Radiation	112
2.5.1	Adiabatic Changes	114
2.5.2	Specific Heats	124
3	Virial Theorem	130
3.1	Virial Theorem	130
3.2	Total Net Energy	140
3.3	Stellar Time Scales	151
3.3.1	Dynamical or Free Fall Time Scale	151
3.3.2	Sound Crossing time	152

3.3.3	Kelvin-Helmholtz time scale	156
3.3.4	Nuclear Time Scale	157
4	Hydrostatic Equilibrium	159
4.1	Equation of Hydrostatic Equilibrium	159
4.1.1	Equation of Motion	159
4.1.2	Hydrostatic Equilibrium	162
4.1.3	Euler vs Lagrangian Coordinates	164
4.2	Some Applications of Equation of Hydrostatic Equilibrium	165
4.2.1	Another Derivation of the Virial Theorem	165
4.2.2	Potential Energy	167
4.2.3	Estimate of Pressure at the center of a star	178
5	Some Theorems about Gaseous Configurations	182
5.1	Total Energy	182
5.2	Eddington-Chandrasekhar result for Central Pressure	185
5.2.1	Effect of Radiation Pressure	187
5.3	Mean Temperature & Pressure inside the Star	192
5.4	Homologous Transformations of Gaseous Spheres	194
6	Stellar Structure: Preliminaries	197
6.1	Equation of Energy Transport	197
6.2	Equations of Stellar Structure	203
6.2.1	Simplifying Assumptions	208
7	Stellar Structure: Details	216
7.1	Polytropes	216
7.2	Lane-Emden Equation	219
7.3	Solutions of the Lane-Emden Equation	223
7.3.1	Solution for $n=0$	224
7.3.2	Solution for $n=1$	225
7.3.3	Solution for $n=5$	227
7.3.4	Numerical Solutions for other values of n	229
7.4	Some Important Results for Polytropes	233
7.4.1	Radius of a Star	233
7.4.2	Mass	233
7.4.3	Mass-Radius Relationship	235
7.4.4	Central Density & Average Density	236
7.4.5	Central Pressure	237

7.4.6	Central Temperature	239
7.4.7	Gravitational Binding Energy	241
7.5	Simplified Eddington Model	244
7.6	Comparison of Eddington Model with Standard Solar Model	249
7.7	Homologous Transformations	256
7.7.1	Mass-Luminosity Relation	261
7.7.2	Mass-Radius Relation	262
8	Energy Transport in Stars	264
8.1	Some General Considerations	264
8.2	Opacity	267
8.3	Emission	272
8.4	Diffusion Approximation	275
8.4.1	Eddington Luminosity	280
8.5	Sources of Opacity	286
8.5.1	Electron Scattering	287
8.5.2	Free-Free Absorption	292
8.5.3	Bound-Free Absorption	295
8.5.4	Bound-Bound absorption	298
8.5.5	Negative H ion	298
8.5.6	Molecular Opacity	299
8.6	Convection	302
8.6.1	Pressure scale height	303
8.6.2	Adiabatic Temperature Gradient	305
8.6.3	Brunt-Vaisala Frequency	311
8.6.4	Stability against convection in terms of energy production rate	315
8.6.5	Mixing-Length Model	319
8.7	The Standard Model	331
8.7.1	Mass	332
8.7.2	Central Density	333
8.7.3	Central Pressure	333
8.8	Central Temperature	334
8.8.1	Mass-Luminosity-Radius Relation	337
9	Energy Generation in Stars: Reaction Rates	340
9.1	Kelvin-Helmholtz Hypothesis	340
9.2	Nuclear Reactions: Some Preliminaries	342
9.2.1	Kinematics	342
9.2.2	Binding energy of the Nucleus	346

9.3	Cross Section	349
9.4	Digression: Is Fusion possible classically?	353
9.5	Reaction Rate	359
9.6	Corrections to the Reaction Rates & Cross Section	378
10	Nuclear Burning & Stellar Evolution	380
10.1	Introduction	380
10.2	Life Before the Main Sequence	381
10.2.1	Giant Molecular Clouds	381
10.2.2	Stages of Star formation	382
10.3	Nuclear Burning: General Comments	398
10.3.1	Deuterium Formation	399
10.4	PPI chain	401
10.4.1	Deuterium Burning	403
10.4.2	Helium-3 Abundance	407
10.4.3	Energy Generation	418
10.5	PPII & PPIII Chains	419
10.6	Energy Generation	430
10.7	CNO Bi-Cycle	435
10.8	Solar Neutrino Problem	440
10.9	Nuclear Burning Beyond the Main Sequence	445
10.9.1	Triple- α Reaction	445
10.9.2	Carbon & Oxygen Burning	447
10.9.3	r & s processes	448
11	Post Main Sequence	
	Part I: White Dwarfs	452
11.1	Introduction	452
11.2	Red Giant Phase	454
11.2.1	Schönberg- Chandrasekhar Limit	454
11.2.2	Sub-Giant (SGB) & Red Giant Branches	459
11.3	Helium Burning Phase	461
11.4	Asymptotic Giant Branch & Planetary Nebulae	462
11.5	White Dwarfs	464
11.5.1	Non-Relativistic Complete Degeneracy	465
11.5.2	Relativistic Complete Degeneracy	469
11.5.3	Partial Degeneracy	480
11.6	Equation of State of a completely degenerate star	496
11.6.1	Radius of the Star	502

11.6.2	Gravitational Potential	503
11.6.3	Mass	505
11.6.4	Mass-Radius Relation	512
11.6.5	Mean Density	513
11.6.6	Mass of a Non-relativistic Degenerate Star	514
11.6.7	Mass of a Ultra Relativistic Degenerate Star	515
11.6.8	Physical Arguments for a Limiting Mass	517
11.6.9	Type Ia Supernovae	519
11.6.10	Internal Energy	520
11.7	Cooling of White Dwarfs	524
11.7.1	Internal Temperature of a White Dwarf Star	526
12	Post Main Sequence	
	Part II: Neutron Stars & Black Holes	530
12.1	Introduction	530
12.2	Core Collapse Supernovae	530
12.3	Neutron Star	536
12.3.1	Structure of a Neutron Star	536
12.3.2	Maximum Mass	538
12.3.3	Relativistic Corrections	539
12.3.4	Numerical Solutions to the TOV equation	548
12.3.5	Rotation & Magnetic Field of Neutron stars	557
12.4	Pulsars	559
12.4.1	Pulsar Properties	561
12.4.2	Oblique Rotator Model	562
12.4.3	Pulsars as probes for interstellar matter- Dispersion Measure	566
12.4.4	Pulsars as probes for interstellar matter- Rotation Measure	569
12.4.5	Pulsar Magnetosphere	574
13	Galaxies	582
13.1	Introduction	582
13.2	Overview & Definitions	582
13.3	The Milky Way	584
13.3.1	Stars in the Milky Way	585
13.3.2	Gas & Dust in the Milky Way	586
13.3.3	Mapping the Milky Way	589
13.3.4	Galactic Rotation	590
13.3.5	Rotation Curve	599
13.4	Galaxy Classification	603

13.4.1 Elliptical Galaxies	603
13.4.2 Spiral Galaxies	604
13.4.3 Irregular Galaxies	604
13.5 Evolution & Formation of Galaxies	605
14 Cosmology Part I: Setting up the Equations	607
14.1 Introduction	607
14.2 Principle of Equivalence	608
14.2.1 Why do we need a theory of Gravity	608
14.2.2 Inertial & Gravitational Mass	609
14.2.3 Gravitational Forces	613
14.2.4 Christoffel Symbols	615
14.3 Principle of General Covariance	617
14.3.1 Tensors & Vectors	618
14.3.2 Covariant Derivative	623
14.4 Riemann Curvature tensor	628
14.4.1 Bianchi Identities	630
14.5 Energy-Momentum Tensor	632
14.5.1 Energy-Momentum Tensor of a Perfect Fluid	636
14.6 Einstein's Equations	638
14.6.1 Schwarzschild Solution	641
15 Cosmology Part II: Observations & Models	646
15.1 Introduction	646
15.2 The Observed Universe	647
15.2.1 Expansion	647
15.2.2 Cosmic Microwave Background Radiation	651
15.2.3 Large Scale Homogeneity & Isotropy	653
15.2.4 Abundances of Light elements	655
15.3 Towards a cosmological model	655
15.3.1 Robertson-Walker Metric	655
15.3.2 Flat Robertson-Walker Metric	656
15.3.3 Spatially Curved Robertson-Walker Metrics- Closed Models	659
15.4 Kinematic Properties of the Robertson-Walker metric	669
15.4.1 Red Shift	669
15.4.2 Distance Measures	681
15.4.3 Redshift-Distance relationship	684
15.4.4 Angular Diameter Distance-Red Shift relation	688
15.4.5 Number Counts	689

15.4.6	Conformal Time	689
15.5	Dynamics of the Robertson-Walker Model	692
15.5.1	Einstein's Equations for Robertson-Walker metric	692
15.5.2	Critical Density and Friedmann equations	710
15.5.3	Cosmological Constant & Friedmann Equations	712
15.6	Expansion Age of the Universe	719
15.6.1	Matter Dominated Era	719
15.6.2	Radiation Dominated Era	726
15.6.3	Age of the Universe & Lookback time	730
15.6.4	Horizons	742
15.7	Benchmark Model of Cosmology	756
15.8	Brief Thermal History of the Universe	772
15.8.1	Thermodynamics in an Expanding Universe	774
15.8.2	Entropy	777
15.8.3	Primordial Nucleosynthesis	793
15.9	Structure in the Universe	797
15.9.1	Jeans' Theory	797
16	Inflation & Very Early Universe	809
16.1	Introduction	809
16.2	Problems with the Hot Big Bang Model	810
16.2.1	Flatness Problem	810
16.2.2	Horizon Problem	812
16.2.3	Monopole Problem	813
16.3	Inflation as a Solution	815
16.3.1	Inflationary Solution to the Flatness Problem	816
16.3.2	Inflationary Solution to the Horizon Problem	818
16.3.3	Inflationary Solution to the Monopole Problem	820
16.4	Mechanics of Inflation	821
A	Classical & Quantum Statistics	827
A.1	Introduction	827
A.2	Maxwell-Boltzmann Statistics	828
A.2.1	Ideal Gas	836
A.3	Fermi-Dirac Statistics	844
A.4	Bose-Einstein Statistics	852
B	Newtonian Theory of Small Perturbations	856
B.1	Introduction	856

B.2	Density perturbations in an expanding universe	856
B.3	Growth of Perturbations	863
B.3.1	Matter Perturbations in Matter dominated universe	863
B.3.2	Radiation perturbations in Radiation Dominated Universe	865
B.4	Summary of Jean's Theory in an expanding universe	867
B.5	Transfer Function	872
B.6	Power Spectrum	875
B.7	Adiabatic Gaussian Perturbations	876
B.7.1	Harrison-Zeldovich Spectrum	878
B.8	Power Spectrum Today	879
C	Physical Constants & Useful relations	881
D	Some Useful Integrals	884
E	Spherical Astronomy	895
E.1	Introduction	895
E.2	The Spherical Triangle	896
E.3	Length of an arc of a Small Circle	897
E.4	Cosine Formula	898
E.5	sine formula	901
E.6	Quantities of interest and their definitions	902
E.7	Astronomical Triangle	906
