Some Notes on Quantum Mechanics

Version 1.1

Last modified on January 12, 2024

Contents

1	Some Preliminaries	5
1.1	Introduction	5
1.2	Postulates	5
1.3	Qubits	14
1.3.1	Quantum Zeno Effect	17
1.3.2	Representation of Qubits	18
1.4	Spin	20
1.4.1	Stern-Gerlach experiment	21
1.4.2	Spin one-half states & Operators	26
1.4.3	Pauli Spin matrices	31
1.4.4	Spin in an arbitrary direction	32
1.4.5	Action of Pauli matrices on an arbitrary qubit	35
1.5	Two State Systems	38
1.5.1	Spin in a magnetic field	38
1.5.2	Two state system as a spin system	41
1.5.3	The Ammonia Molecule as a 2-state system	42
1.6	Photons as qubits	45
2	Multi Qubit Systems	51
2.1	States & Operators	51
2.1.1	States	51
2.1.2	Operators	54
2.2	Entanglement	59
2.3	Density Matrices	65
2.3.1	Density Matrix of a Pure state	67
2.3.2	Density Matrix of a mixed state	68
2.3.3	A method of determining if a state is entangled	71
2.3.4	Systems not in a single quantum state	78
3	Quantum Gates & Circuits	80

3.1	Introduction	80
3.2	Classical Gates	80
3.3	Quantum Gates	84
3.3.1	Single Qubit gates	85
3.3.2	Multiple Qubit gates	90
3.4	Measurement Gates	94
3.5	Quantum Circuits	96
3.6	Identities with quantum gates	104
4	Quantum Strangeness	110
4.1	Introduction	110
4.2	Bell Basis states	110
4.3	No Cloning Theorem	117
4.4	Quantum Teleportation	120
4.4.1	Superdense Coding	123
5	EPR & Bell Inequalities	126
5.1	EPR Argument about Hidden Variables	126
5.2	Bell Inequalities	127
5.2.1	CHSH Inequality	140
6	Quantum Algorithms	145
6.1	Introduction	145
6.2	Quantum Parallelism	145
6.3	Deutsch's Algorithm	147
6.4	Phase Kickback	157
6.5	Deutsch-Jozsa Algorithm	159
6.6	Bernstein-Vazirani Algorithm	167
6.6.1	Implementation & Example	171
6.7	Simon's Algorithm	173
7	Factoring an Integer	179
7.1	Euclid's Algorithm	179
7.2	Modular Arithmetic	182
7.3	Euclidean Algorithm for Inverse Modulo an integer	188
7.4	Factorisation using Period Finding	189
8	RSA Algorithm	196
8.1	Introduction	196
8.2	RSA Algorithm	196

8.2.1	The problem	196
8.2.2	The Algorithm	197
8.3	Cryptography with Photons	203
8.3.1	BB84 Protocol	204
9	Discrete Fourier Transforms	207
9.1	Fourier Transforms	207
9.2	Discrete Fourier Transforms	208
9.3	Fast Fourier Transforms	215
9.4	General form of FFTs	221
10	Quantum Fourier Transforms	229
10.1	Introduction	229
10.2	Quantum Fourier Transform	229
10.3	Quantum Fourier Transform Circuit for 2 qubits	230
10.4	Quantum Fourier Transform Circuit for 3 qubits	238
10.5	QFT for n bits- a general approach	241
10.6	Phase Estimation Algorithm	243
10.7	Comparison of $N = 4$ Fast Fourier Transform with Quantum Fourier Transform	247
10.7.1	$N = 4$ Fast Fourier Transform	248
10.7.2	$N = 4$ FFT and QFT	250
11	Shor's Algorithm	252
11.1	Introduction	252
11.2	Modular Exponentiation	252
11.3	Quantum Fourier Transform in Shor's algorithm	254
11.4	Case of r being a power of 2	256
12	Error Correction	259
12.1	Introduction	259
12.2	Coherent superposition	259
12.3	Incoherent probabilities	261
12.4	Classical Error Correction	263
12.5	Quantum Error Correction	265
12.5.1	Bit Flip Error correction	266
12.6	Stabilizer Formalism	272
12.7	Phase Flip Errors	280
12.8	Arbitrary Errors & Their correction	283
12.8.1	General Errors	284

12.8.2 Shor's 9-qubit Code	286
13 Physical Realization of Quantum Computers	295
13.1 Introduction	295
13.2 General Requirements for a physical quantum computer	295
13.3 Harmonic Oscillator as a quantum computer system	296
13.4 Some other examples of physical systems as quantum computers	300
13.4.1 Optical Photons	300
13.4.2 Ion Traps	300
13.4.3 NMR	301
Index	302
