

Getting Started on HTML & Web page Design

Seema Sirpal
Delhi University Computer Centre

How to

- plan a web development project
- draft a design document
- convert text to HTML
- use Frontpage to create web pages
- incorporate images to web pages
- use Frontpage to maintain web pages
- evaluate a web site

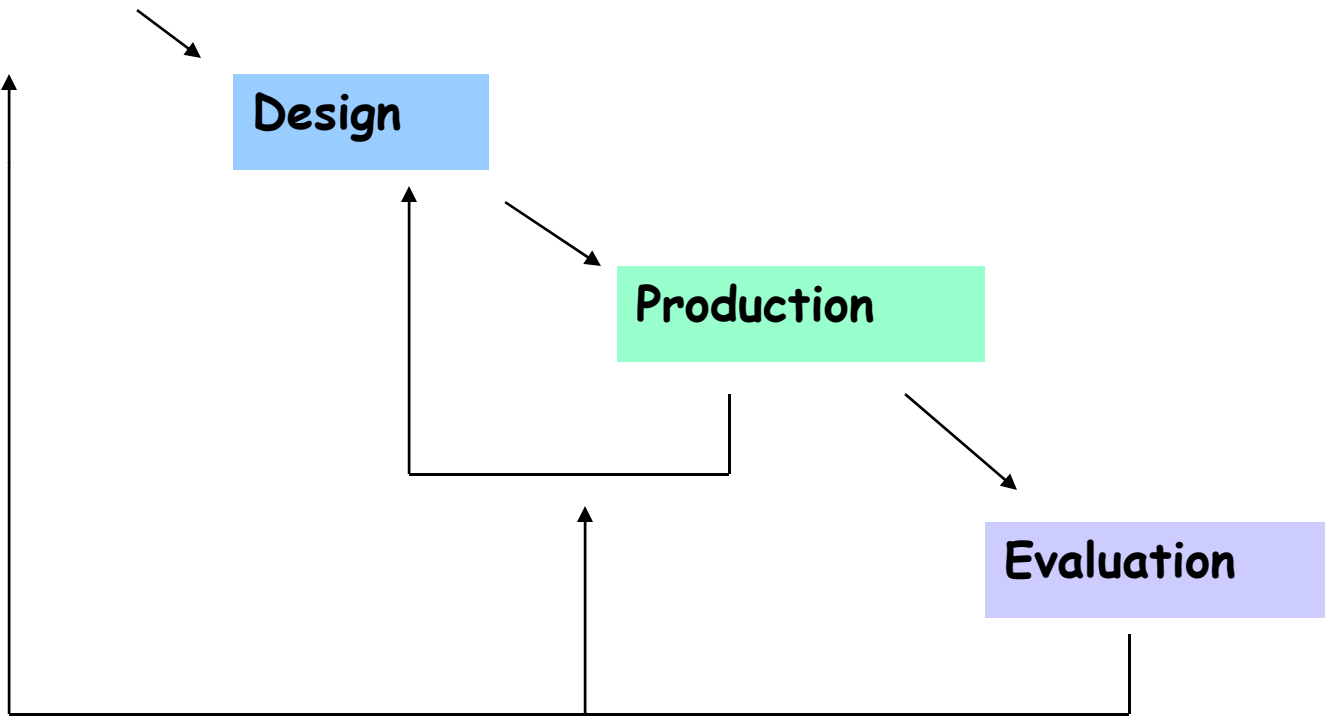

Steps

Analysis

Design

Production

Evaluation

Analysis

Design

Production

Evaluation

- Ask these questions when planning your web site
 - What is your goal?
 - Who is the audience?
 - What is the content?
 - What is the timeline?

- **Design Document**

- Consolidate your planning
- Site structure, content, navigation, page layout, etc.

Analysis

Design

Production

Evaluation

- **Usability: Jacob Neilson's "Top 10 mistakes in Web design"**

- Using frames
- **Gratuitous** use of Bleeding-edge technology
- Scrolling text, constantly running animation
- Complex URLs
- Orphan pages
- Long scrolling pages
- Lack of navigation support
- Non-standard link colors
- Outdated information
- Long loading time

Analysis

Design

Production

Evaluation

- Use Web authoring tool (Frontpage) to create the web pages
- Other tools
 - Dreamweaver
 - PageMill
 - Netscape Composer
 - Notepad

Analysis

Design

Production

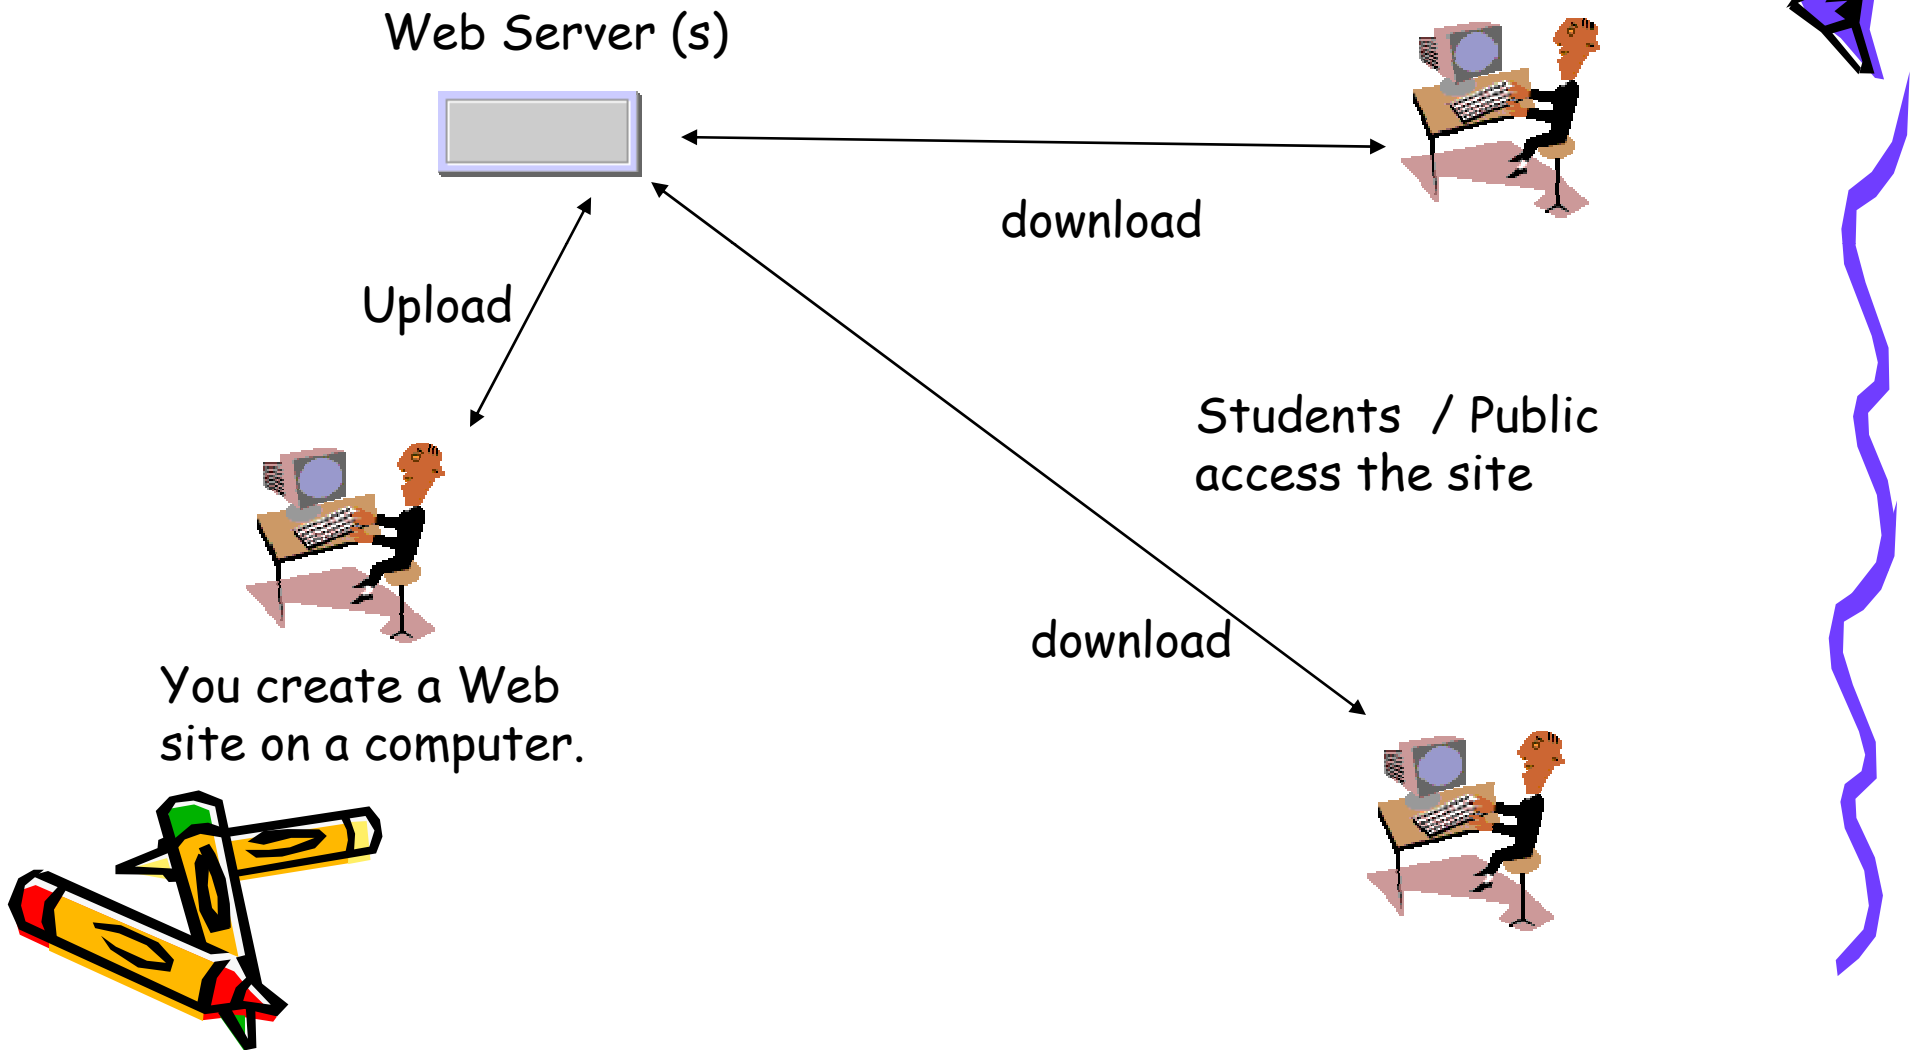

Evaluation

- Test the web pages locally
- Upload the files to a Web server: publish your web site
- Get user feedback
- Replan, redesign and revise the site

Publish your website

Top 13 Rules to Follow for Web Design

- Design guidelines for successful web site development
- Keep these rules in mind when creating your web site

Rule 1: Define your goals

- Without a clear set of goals your site will fail
- Define:
 - Target audience
 - Objectives
 - Purpose
 - Content Outline

Rule 2: Content

- Nothing is more important than the content of the site
- Content should be:
 - Informative
 - Accurate
 - Timely
 - Readable
- Don't design your site without the content

Rule 3: Keep It Simple

- Just because you can add something to the page doesn't mean you should
- Things that get over used:
 - Excessive images, animated graphics or blinking text
 - Frames
 - Background images
- Ask yourself:
 - What value am I adding with this technique?
 - Is this the best way to communicate what I want to say?

Rule 4: Simple Not Boring

- Don't confuse fancy effects with effective communication
- Think about how people will be using your pages
- Split your information into logical sections

Clean Design + Good Use of Technology = A Good Web Site

Rule 5: Three Clicks

- Get as much information to the users as possible
- Never have information more than three clicks away
- Remember, if someone is visiting your site they are looking for information
 - Make it easy to find
 - Ask yourself what they might be looking for
 - Give contact information

Rule 6: Words Matter

- If content is King it must sound good
- Be sure to use correct grammar
- Spell check and proofread
- In some cases you may need a writer

Rule 7: Links

- Create descriptive links
 - 7 to 10 words in length
 - Avoid "click here"
- Add descriptive "alt" tags to all graphics
- Offer multiple navigation

Rule 8: Graphics

- Avoid overuse of graphics
- In information sites graphics should only be used for information purposes
 - Charts or diagrams
 - Maps and drawings
 - Product images
 - Navigation
- Well designed sites don't always need graphics

Rule 9: Consistency

- Use a consistent layout for your entire site
- Break sections up with color
- Use consistent navigation
- Makes changes easier

Rule 10: Keep It Fresh

- Keep your site current
- Think about weekly or bi-weekly updates
- Users will only return if they think content is new

Rule 11: Avoid Under Construction

- If the content is unavailable don't put it on your site
- Web sites are supposed to change all the time
- Follow Rule 10 and add the items when they are available

Rule 12: Layout

- Use tables to maintain layout control
- Scrolling pages are OK (within reason)
- If pages are not printable offer a printable version
- Give file sizes for embedded (downloadable) files
- Use descriptive titles
- Offer contact information

Rule 12: Layout (continued)

- Not everyone has a 17" monitor (maybe)
 - Design for 600x320 or 723x390
 - Use web-safe colors
- Make sure your starting page is attractive and well planned
- Try to have a consistent theme throughout the entire site
- Try to use colors, styles and fonts that complement each other

Rule 13: Have Someone Look at It

- Watch one of your users use the site
 - Not a co-worker
 - Someone who will use the information

Web Languages

- **Client-Side**

- HTML
- JavaScript
- CSS

- **Server-Side**

- PHP
- CGI
- XML

- **Hybrid**

- AJAX
(Asynchronous
Javascript)

Working with HTML

- HTML is a language for describing web pages.
- HTML stands for Hyper Text Markup Language
- HTML is not a programming language, it is a markup language
- A markup language is a set of markup tags
- HTML uses markup tags to describe web pages

HTML Tags

- HTML markup tags are usually called HTML tags
- HTML tags are keywords surrounded by **angle brackets** like `<html>`
- HTML tags normally **come in pairs** like `` and ``
- The first tag in a pair is the **start tag**, the second tag is the **end tag**
- Start and end tags are also called **opening tags** and **closing tags**

HTML Documents = Web Pages

- HTML documents describe web pages
- HTML documents contain HTML tags and plain text
- HTML documents are also called web pages

What do I need to Begin Designing a Web Page?

- A Folder (also called a Directory)
- A Browser
- A Word Processor or FrontPage

Steps

- create your web page in a text editor such as Notepad (typing in all the text and tags)
- save your web page as an HTML file using any appropriate name
- load the HTML file into the browser to see how your web page looks and works
- switch back to Notepad to make any corrections, changes, etc.

Summary

- Good Web design is important
- A badly designed Web site will frustrate users
- Bad design should be avoided by testing
- Content should be relevant and up to date
